

HEMANTH KUMAR A. R.

+91 9591618783 | hemanthar95@gmail.com | [linkedin - arhemanthkumar](#) | [github - arhemanthkumar](#)

TECHNICAL SKILLS

Languages: Python, C/C++.

Frameworks: YOLOv4, Tesseract OCR, Flask, Tailwind CSS, Git, Postman.

Deployment & Monitoring: Production Deployment, API Integrations, Bot Testing, Call Monitoring, Hypercare Support.

Conversational AI & GenAI: Prompt Engineering, GenAI Bots, Prompt Engineering, LLMs, Voice AI Agents, Intent Detection, Multilingual Bot Design.

EXPERIENCE

Associate - AI Solution Delivery

Dec. 2025 – Present

Blue Machines by Apna

Bangalore, India

- Led end-to-end delivery of multilingual voice AI agents by gathering client requirements, preparing solution documents, designing conversation flows, and deploying production-ready bots, handling 1 lakh+ calls monthly.
- Selected and optimized the best STT, LLM, and TTS models for different client use cases, while performing prompt engineering, testing, and continuous improvements to enhance bot accuracy and call experience.
- Monitored live production calls, handled debugging and issue resolution, and managed the hypercare period during the initial post-deployment phase to ensure smooth client onboarding and stable performance.
- Collaborated cross-functionally with engineering, product, and delivery teams to solve complex workflow challenges, API integrations, and client-specific automation requirements.

Associate Software Developer

Mar. 2025 – Dec. 2025

Gnani.AI

Bangalore, India

- Led the design and deployment of enterprise-grade multilingual GenAI and NLP conversational voice bots, accelerating bot delivery time by 60%, reducing development cycles through GenAI-driven automation.
- Developed domain-specific AI bots leveraging NLP, NLU, and prompt engineering, achieving up to a 40% loan recovery rate for financial clients through intelligent EMI collection automation.
- Applied advanced GenAI and LLM techniques to enhance bot accuracy, contextual understanding, and multilingual adaptability, improving user satisfaction and automation coverage.
- Collaborated cross-functionally with engineering, delivery, and product teams to deliver high-impact, customer-centric AI solutions with focus on scalability, accuracy, and performance.

PROJECTS

Automatic License Plate Recognition System | Python, YOLOv4, Tesseract, Flask

May 2024 – July 2024

- Built a system for Vehicle Movement Analysis and Insight Generation in a college campus using Edge AI.
- Delivered 96% accuracy in recognition of Vehicle Type, License Plate and other parameters.
- Fine-tuned YOLOv4 object detection model using real-time data collected on campus.
- Optimized Tesseract optical character recognition engine to identify the latest HSRP up to 85%.
- Generated insights and interactive visualizations in a Flask web app for over 100 vehicles.

Mouse Jiggler | Python, Tkinter, PyAutoGUI, Git

Dec 2023 – Feb. 2024

- Created a desktop application using Tkinter to prevent system idleness by simulating mouse movements.
- Implemented threading for efficient background execution, resulting in 70% more responsive performance.
- Integrated real-time control through a slider, enabling jiggling interval from 0 to 60 seconds.
- Utilized the Pyautogui library for precise mouse movement automation.

EDUCATION

B.E. in Electronics and Communication, CGPA: 9.1

Dec. 2021 – Jul. 2025

Sapthagiri College of Engineering

Bangalore, India

CERTIFICATIONS

Certified in Cybersecurity - ISC2

Jan. 2024

- Acquired knowledge in cybersecurity principles, risk management, threat assessment and incident response.
- Mastered key techniques for securing networks and systems, ensuring compliance with industry standards.
